Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because the abstract should be a single paragraph. Correction is required. See MPEP § 608.01(b).

Claim Objections

2. There is no claim 10 in the original claims filed on 10/14/2005. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Nishimura et al (US Patent Application 2005/0227702).

Nishimura et al disclose, in figure 1, a wireless communication device comprising antenna storage sections which are formed integrally with a body of the device in a periphery section of a display screen 51, wherein the antenna storage sections provided on both left and right sides of the display screen are also used as speaker storage sections and at least an antenna (89) and a speaker (55) are stored in each of the antenna storage sections.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 4-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nishimura et al in view of Flint et al (US Patent 6,339,400), cited by applicant.

The patent to Nishimura et al, described above, differs from the claimed invention because it does not disclose the specific direction of the antennas and specific kind of the antennas (L shape or F shape). Flint et al disclose, in figure 6, a wireless communication device comprising a plurality antennas (61,62) disposed on the peripheral section of a display screen, wherein the directions of the antennas differ from each other by 90 degrees. The patent to Flint et al also teaches that the antennas having L shape and F shape, See figure 12. Since one of ordinary skill in the art would recognized the benefits of resonating of vertical and horizontal polarizations, it would have been obvious to provide the wireless communication device of Nishimura et al with the antenna arrangement as taught by Flint et al.
